**Approval to Supply
HX Cable Identification Heat shrink tube +
HLX Identification Cable Markers**

Dear Sir,

It is confirmed that the above cable identification products meet the reaction to fire requirements detailed in LUL standard 2-01001-002-A1 for rolling stock and premises applications. The above product designs have now been registered, and shall not be changed without prior notification.

The HX marker is a heat shrink tube, whereas the HLX marker has been declared as being made from the same material as the HX product when in its fully shrunk state, but attached to the cable to be identified by means of cable ties.

Please advise if you require any additional feedback or assistance.

Yours faithfully

A handwritten signature in blue ink that reads "J.P. Carter".

John Carter
Materials Engineer
